DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2 and 4-9, drawn to a substantially purified nucleic acid molecule, and a transformed plant, classified in class 800, subclass 298, for example.
- II. Claim 3, drawn to a substantially purified rice protein or fragment thereof, classified in class 530, subclass 370, for example.

For inventions I and II above, restriction to one of SEQ ID NOS: 1 through 81288 is also required under 35 USC 121. Therefore, upon election of invention I or II, one of SEQ ID NOS: 1 through 81288 must also be elected.

Applicants are reminded that nucleotide sequences encoding different proteins, and the proteins they encode, are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide and amino acid sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of a single genus of invention, but constitutes an independent and patentably distinct invention.

Art Unit: 1638

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. The substantially purified nucleic acid molecule of invention I is structurally and functionally distinct from the substantially purified rice protein or fragment thereof of invention II. Additionally, the substantially purified rice protein or fragment thereof of invention II is not used to make the transformed plant of invention I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
